Managed Monitoring Service

Keep your infrastructure healthy, secure, and catch issues before they become problems.

Database Monitoring

- Monitoring of SQL Servers and other databases for availability and performance bottlenecks.

This enables you to gain insights into your full scope of resource utilization to optimize and stay up-to-date.

Cloud Services Monitoring

- We stay far ahead of potential service disruptions by continuous monitoring of platforms including (but not limited to): Microsoft 365, Azure, and other key SaaS apps.

Application Monitoring

Cornerstone recognizes your organization has vital tools and apps that need to stay seamlessly functional.

We provide health and performance tracking for business-critical applications and custom platforms.

Server & Endpoint Monitoring

Your servers and endpoints are in constant use. We make sure they stay that way in real-time.

We diligently employ real-time monitoring of servers and unique workstations for uptime, CPU/ memory usage, disk health, and critical services.

Proactive monitoring that keeps your infrastructure healthy, secure, and high-performing, so that issues are caught well before they become problems.

Cornerstone commits to organized monitoring and informed guidance.

Security & Event Log Monitoring

Centralized log collection with alerting for suspicious activity, failed logins, and unusual behavior, backed by diligent response guidance.

Backup & Disaster Recovery Monitoring

Daily oversight to ensure backup jobs complete successfully, retention policies are safely met, and recoverability is maintained.

Network Monitoring

We enable proper transparency for all aspects of your network.
What does this entail?

We bring visibility into your firewalls, switches, routers, and WAN performance. This is all included with alerting for downtime, latency, and anomalies.
